Various start-ups participated in an Innovation Challenge hosted by Digital Impact Square (DISQ), a pre-incubator for social innovation backed by Tata Consultancy Services (TCS) Foundation. Digital Impact Square's 'DISQovery 2021' initiative set out, early this year, to look for teams of young innovators with an entrepreneurial bent of mind, who will work to turn an idea or a concept into a successful startup.

Start-ups submitted digital technologies that have the potential to address social challenges in a range of areas – including health and hygiene, housing and transportation, food and agriculture, energy, water and environment, financial and personal security, citizen empowerment and transparency, education, and skills development. After careful evaluation, DISQ selected seven start-ups for incubation, with another seven start-ups receiving an opportunity to benefit from a boot camp. The selected startups will now commit to further their work in Assistive Technologies, AgriTech, Rural Entrepreneurship, and Telemedicine.

Digital Impact Square (DISQ), is an online platform. It is an open social innovation platform designed to enhance the lives of citizens by encouraging innovation using digital technologies.
